

THE ULTIMATE ORGANIC PLANT FERTILISER is what we help our worms create in the form of Supercharged Biological Active Liquid concentrate. This is made from the castings in our worm farm through a process called extraction. Plants need a consistent supply of active biology to stay healthy and replenish the soil.

Recommended use of Supercharged Biological Active Liquid (BAL): Frequency is dependent on plant life cycle, example: first buds to last harvest!

Do not apply to dry soil or in full sunlight. Spraying the leaf is most efficient. First application, 50ml of BAL in 1 litre of water.

(We recommend using rain water*)

Second application, 10 to 20 days later, 30ml of BAL in 1 litre water

Continued applications, at 10-to-20-day intervals, 20ml of BAL in 1 litre water

Application rate: 10 litres of concentrate per Hectare, using whatever amount of water for full coverage.

For soil drenching first application, double the amount above. E.g., 20 litres concentrate per hectare.

rain water* City tap water has Chlorine added to sanitize and kill all bacteria-microbes. Which can include the microbes in your BAL!

Maintenance: Leave lid off BAL container for oxygen. Shake for 10 seconds each day to invigorate microbes. Store in a cool place away from sunlight. Use what concentrate you make within 20 days.

Recommended use of Worm Castings:

1 x handful (1/3 metric cup) of castings in the bottom of the hole for seedlings. Place plant roots on top of castings, firm up soil around plant, water in with juice mix.

3 x handful to 1 kilogram of seed raising mix, thoroughly mix together

1 Litre of castings to 20 kilograms garden soil, thoroughly mix together

2 Litres of castings can be used to make 10 litres of concentrate liquid to apply to 1 Hectare. Contact us to learn how to make your own extracts!

Maintenance: Keep castings bucket with lid loose for fresh air.

To keep moist, store in a cool place away from sunlight.

Made in Australia - 100% environmentally safe

Our organic Supercharged Biological Active Liquid and castings are loaded with billions of living beneficial microbes and over 70 mineral nutrients and trace elements. There are also soluble humates which are good beneficial fungi promotants, growth stimulants and all the other benefits it brings.

Plus, beneficial fungi including, Bacillus, Trichoderma and Mycorrhizal.

There is nothing as good as living active microbes for your plants and soil!

Adding castings to kick start soil biology and then a steady supply of BAL to the plants will reduce your inputs over the long term, saving you money. These micro-organisms help hold moisture around the plants root zone!

Foliar spray (leaf spraying with pressure spray pack) is an instant supply of plant nutrition when sprayed at the correct leaf temperature. If any more information is required, contact us.

BAL has been filtered ready for any spray nozzle or fertigation and drip systems.

What and how we feed our worms, offers amazing benefits to your plants & soil. Our supercharged Biological Active Liquid and castings are potent biological active plant foods. Healthy plants need a consistent supply of active soil biology, to maintain the nutrition levels needed to pass the benefits on to you. Please contact us anytime for help!

Application rate: 10 litres concentrate per Hectare, using whatever amount of water for full coverage.

For soil & plant application only

Not for human or animal consumption

Keep out of reach of children
