

THE ULTIMATE ORGANIC PLANT FERTILISER is what we help our worms create in the form of Supercharged **B**iological **A**ctive **F**ertiliser. This is worm castings in our worm farm. You make a liquid concentrate through a process called extraction. Plants need a consistent supply of active biology to stay healthy and replenish the soil. Remember to keep adding organic matter (Mulch) so the microbes have something to mine for minerals to feed your plants!

Recommended use of Supercharged Biological Active Fertiliser (BAF):

Frequency is dependent on plant life cycle, example: first buds to last harvest!

If using pressurised spray equipment, you will need to filter the small particles out.

If using a watering can, you may want to filter through some porous fabric.

Do not apply to dry soil or in full sunlight. Spraying the mature leaf top and bottom is most efficient for older plants. Be careful not to drench young reddish coloured leaf.

It is recommended you only make enough BAF concentrate to use that day!

First folia application, 30ml of castings to 1 litre of water.

(We recommend using rain water or dam water*)

Second application, 10 to 20 days later, 30ml of castings 1 litre water

Continued applications, at 10-to-20-day intervals, 20ml of BAL in 1 litre water

Application rate for soil drenching: 2 litres of castings make 10 litres of concentrate to apply per Hectare, using whatever amount of water that suits your equipment for full coverage.

* **Rain water** City tap water has Chlorine added to sanitize and kill all bacteria-microbes. Which can include the microbes in your BAF!

Recommended use of Worm Castings:

Just enough castings to cover the bottom of the hole for any sized plant. Place plant roots on top of castings, firm up soil around plant, water in with some BAF.

3 x handful to 1 kilogram of seed raising mix, thoroughly mix together

1 Litre of castings to 20 kilograms garden soil, thoroughly mix together

2 Litres of castings can be used to make 10 litres of concentrate liquid to apply to 1 Hectare. Contact us to learn how to make your own extracts if needed!

Maintenance: Keep castings bucket with lid loose for fresh air, out of direct sunlight.

To keep moist, store in a cool place away from sunlight. Add a little water if they start to dry out.

Made in Australia - 100% environmentally safe

Our organic Supercharged Biological active castings are loaded with billions of living beneficial microbes and over 70 mineral nutrients and trace elements. There are also soluble humates which are good beneficial fungi promotants, growth stimulants and all the other benefits it brings.

Plus, beneficial fungi spore including, Bacillus, Trichoderma and Mycorrhizal.

There is nothing as good as living active microbes for your plants and soil!

Adding castings to kick start soil biology and then a steady supply of BAF to the plants will reduce your inputs over the long term, saving you money. These micro-organisms help hold moisture around the plants root zone and process carbon the best way!

Foliar spray (leaf spraying with pressure spray pack) is an instant supply of plant nutrition when sprayed at the correct leaf temperature. If any more information is required, contact us.

What and how we feed our worms, offers amazing benefits to your plants & soil. Our supercharged Biological active castings are potent biological active plant foods. Healthy plants need a consistent supply of active soil biology, to maintain the nutrition levels needed to pass the benefits on to you. Please contact us anytime for help!

Application rate for soil drenching: 10 litres concentrate per Hectare, using whatever amount of water for full coverage.

For soil & plant application only

Not for human or animal consumption

Keep out of reach of children
